Check with VOC regulations to ensure compliance of all products in your area.

SEM[®] DAMAGE REPAIR

STANDARD OPERATING PROCEDURE

1 PREP & SAND

Clean the surface with **SEM Solve** or **XXX Universal Surface Cleaner**.

Sand the repair area using 80-grit on a DA sander. Remove all paint 2-4" beyond the damaged area. Featheredge the paint with 180-grit on a DA sander.

Blow off with clean, dry air and re-clean with **SEM Solve** or **XXX Universal Surface Cleaner**.

2 MIX AND APPLY FILLER

Mix **Powder-Pro** with supplied hardener. Mix by using pressure and long strokes to keep from introducing air into the mixture. Apply mixed **Powder-Pro** onto the damage while keeping within sanded area. Allow to cure roughly 15 minutes before sanding.

! **Powder-Pro** can be rough-shaped at ~9 minutes at 70° F (21° C)

3 SAND FILLER

Sand filler with 80-120 grit sandpaper. Featheredge the repair with 180-grit sandpaper.

Inspect surface to verify if more filler is needed. if so, repeat steps 2-3.

Blow off to remove all sanding dust.

4 MIX AND APPLY GLAZE

Mix **Smooth Skim** finishing glaze with supplied hardener. Mix by using pressure and long strokes to keep from introducing air into the mixture. Apply mixed **Smooth Skim** onto the area while keeping within sanded area. Allow to cure roughly 15 minutes before sanding.

5 SAND GLAZE

Sand cured glaze with 180-grit sandpaper until the surface is level.

6 FINAL SAND

Final sand the area with 180-grit on a DA sander.

Blow off with clean, dry air to remove all dust.

Inspect the repair for any minor imperfections.

STEEL PANEL REPLACEMENT

STANDARD OPERATING PROCEDURE

1A

SEALER REMOVAL METHOD #1

Remove sealer using the **QLock Strip It Wheel**.

1B

SEALER REMOVAL METHOD #2

Remove sealer using the **Course Grit File Belt** attached to a file belt sander.

2A

PART REMOVAL METHOD #1

Remove spot welds with spot weld cutter. Remove rivets by drilling or grinding. Remove damaged panel and straighten bent flanges with a hammer and dolly.

2B

PART REMOVAL METHOD #2

Remove spot welds with **60 or 80-grit File Belt**.

3

PANEL CUTTING

Cut panel at OEM recommended area using a **Cut Off Wheel**.

4

EDGE STRAIGHTENING

Remove damaged panel and straighten bent flanges with a hammer and dolly.

5

PREP AND GRIND

Clean surfaces with **SEM Solve** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with a clean, lint-free towel.
Grind mating flanges with a 36-80 grit grinding disc at low speed for aggressive grind mark. Remove any adhesive or protective coatings.

6

WELD THROUGH PRIMER

Apply **Zincweld** weld through primer per OEM recommendations on flanges that do not use adhesives.

SEM[®] PANEL & RIVET BONDING

STANDARD OPERATING PROCEDURE

1

REMOVE PART

Remove spot welds with spot weld cutter. Remove rivets by drilling or grinding. Remove damaged panel and straighten bent flanges with a hammer and dolly.

2

DRY FIT

Dry fit all panels to ensure proper alignment. Drill holes for replacement rivets or mark locations of self-piercing rivets.

3

PREP AND GRIND

Clean with **SEM Solve** or **XXX Universal Surface Cleaner**

Grind mating flanges with a 36-80 grit grinding disc, per product TDS, at low speed for an aggressive grind mark. Remove any adhesive or protective coatings.

① If rivet bonding, manufacturers may recommend leaving OEM e-coat on the surface of the new panel. If so, scuff with a red scuff pad.

4

APPLY ADHESIVE

Apply 3/8" – 1/2" bead of **Dual-Mix™ Multi-Purpose Panel Adhesive** or **Structural Impact Resistant Adhesive** per OEM recommendation to both surfaces. Use enough material to completely fill the joint when parts are clamped. Tool with a spreader or acid brush. Cover all exposed bare metal.

① For smaller parts use **Dual-Mix™ Door Skin & SMC Adhesive**

5

(OPTION 1) PANEL BONDING

Clamp panel into place. Do not over clamp. Wipe away excess material.

① Surfaces must be mated during adhesive's working time.

(OPTION 2) RIVET BONDING

Clamp panel in place. Install rivets per manufacturer's recommendations during adhesive's working time. Remove clamps after rivets have been installed. Wipe away excess material.

SEM[®] PANEL & WELD BONDING

STANDARD OPERATING PROCEDURE

1

REMOVE PART

Remove spot welds with spot weld cutter. Remove rivets by drilling or grinding. Remove damaged panel and straighten bent flanges with a hammer and dolly.

2

DRY FIT

Dry fit all panels to ensure proper alignment. Drill holes for replacement rivets or mark locations of self-piercing rivets.

3

PREP AND GRIND

Clean with **SEM Solve** or **XXX Universal Surface Cleaner**

Grind mating flanges with a 36-80 grit grinding disc at low speed for aggressive grind mark. Remove any adhesive or protective coatings.

4

APPLY ADHESIVE

Apply 3/8" – 1/2" bead of **Dual-Mix™ Multi-Purpose Panel Adhesive** or **Structural Impact Resistant Adhesive** per OEM recommendation to both surfaces. Use enough material to completely fill the joint when parts are clamped. Tool with a spreader or acid brush. Cover all exposed bare metal.

① For smaller parts use **Dual-Mix™ Door Skin & SMC Adhesive**

5

(OPTION 1) PANEL BONDING

Clamp panel into place. Do not over clamp. Wipe away excess material.

① Surfaces must be mated during adhesive's working time.

(OPTION 2) WELD BONDING

Clamp panel in place. Weld panel by using Squeeze Type Resistance Spot Welding (STRSW) or traditional MIG welding per the manufacturer's recommendations during adhesive's working time. Remove clamps after welds have been completed. Wipe away excess material.

① No gaps are required for weld bonding through epoxy adhesives. Always follow OEM's instructions for guidelines.

SEM[®] 1K SEAM SEALING

STANDARD OPERATING PROCEDURE

1 PREP

Clean with **SEM Solve** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with a dry, lint-free cloth.

2 SAND

Sand bare metal with P180 grit or use red scuff pad on OEM or e-coat finish. Blow off and re-clean with **SEM Solve** or **XXX Universal Surface Cleaner**. Tack clean. Mask off area to create clean lines.

3 APPLY

Apply **1K Seam Sealer** or **2-IN-1 Seam Sealer** using **1K Pneumatic Applicator** or a manual applicator. Finish with a gloved finger, acid brush, putty knife, or spreader. While product is wet, remove excess by wiping with a small amount of **SEM Solve**.

4 PAINTABLE IMMEDIATELY

Remove masking tape immediately after clean up. Paint immediately with **Factory Pack™** or most solvent-based coatings.

ⓘ Can be painted for up to 24 hours without scuffing. If in doubt, scuff with gray pad prior to painting.

i IMPORTANT INFORMATION

1K Seam Sealers are paintable immediately with most solvent-based coatings, however, always test for compatibility.

⚠ Do not apply **1K Seam Sealer** directly over acid-based self-etching primers or vice versa. Cracking and blistering may occur.

2K SEAM SEALING

STANDARD OPERATING PROCEDURE

1

PREP

Clean with **SEM Solve** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with dry, lint-free cloth.

2

SAND

Bare Metal Surfaces: Sand with P80 grit. Blow off and re-clean with **SEM Solve** or **XXX Universal Surface Cleaner**. Tack clean to remove lint and dust.

Primed Surfaces: Sand primed surfaces with P400 grit or a Maroon Scuff Pad. Blow off and re-clean with **SEM Solve** or **XXX Universal Surface Cleaner**. Tack clean to remove lint and dust.

3

APPLY SEAM SEALER

Apply **SEM 2K Seam Sealer**. Immediately smooth or tool **Seam Sealer** to match OEM texture.

① SEM 2K seam sealers can be applied direct-to-metal, over epoxy primer or 2K urethane primer.

① Always apply over a primer when filling drip rails.

⚠ Never apply over a self etching primer.

SELF LEVELING

Use **Self Leveling Seam Sealer** or **High-Build Self Leveling Seam Sealer** for applications where a flowable sealer is needed.

① Keep tip submerged to minimize air bubbles.

① A heat gun can be used immediately after application to remove any air bubbles that become entrapped. With a steady motion and low heat, sweep the heat gun across surface at a distance of 2" – 6".

SPECIALTY TIPS

Use **ORBIT**, **SHFT** and **Versa-Tips** to duplicate hard-to-match seam sealer beads.

ORBIT is used for duplicating "ripple beads"

SHFT is used for hem flanges

Versa-Tips can create 1/2"- 1 1/2" beads

① **Versa-Tips** can be cut to the desired bead width and are compatible with both standard and self leveling **SEM 2K Seam Sealer**

INNER PANEL CORROSION PROTECTION

STANDARD OPERATING PROCEDURE

1

THE Rigid 360° Applicator

Rust Preventer Cavity Wax is easily applied with a 360° spray pattern when using the **Rigid 360° Applicator**.

⚠ Do not spray without tip being inserted into inner panel access point.

2

PREP & APPLY

Clean accessible surfaces with **SEM Solve** or **XXX Universal Surface Cleaner**.

Remove cap from **Rust Preventer Cavity Wax** and attach straw or **Rigid 360° Applicator**.
Apply 1-2 coats

ⓘ Change angle and depth of the tip inside panel to ensure coverage.

Pro Tip

Mark the end of the **Rigid 360° Applicator** with masking tape to keep from spraying outside the panel.

3

CLEAN APPLICATOR

Clean **Rigid 360° Applicator** by attaching the tip and Applicator to **XXX Universal Gun Cleaner**.

ⓘ Spray into enclosed container or clean cloth until applicator is clean. Wipe off residual remnants from outside of tube

SPRAYABLE SOUND DAMPENING

STANDARD OPERATING PROCEDURE

1

PREP

Clean with **SEM Solve** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with clean, lint-free cloth.

2

SAND

Sand primer with P180 grit. Sand bare metal with P80 grit. Blow off and tack clean. Re-clean with **SEM Solve** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with clean, lint-free cloth.

3

SET UP EQUIPMENT

Place **Dual-Mix™ Sound & Seal Sprayable Coating** into **Universal Pneumatic Applicator**. Equalize cartridge until sides dispense equally. Attach **Quick Spray System** to applicator and cartridge.

⚠ Do not cut static mixer tip.

4

APPLY

Apply to necessary areas, duplicating existing texture in one coat.

⚠ Do not apply over self etching primer.

① To achieve various textures, modify the air pressure, spray distance and spray tip.

2K LOWER PANEL PROTECTION

STANDARD OPERATING PROCEDURE

1

PREP

Clean with **SEM Solve** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with dry, lint-free cloth.

2

SAND, CLEAN & PRIME

Sand with 180-220 grit sandpaper.

Prime any bare metal and aluminum areas as per manufacturer's instructions.

Sand e-coat with a **Maroon Scuff Pad**.

Sand primer with 180-220 grit sandpaper.

Blow off and tack clean before application.

3

IDENTIFY TEXTURE

Use the photo on the back of box to choose the appropriate texture.

Scan the QR code to download the product TDS for detailed instructions on how to duplicate the texture

4

MIX

Add activator to bottle of **2K Urethane Chip Guard**. Shake bottle for two minutes before applying.

2K Urethane Chip Guard can also be tinted with solvent-based toners by adding 1 oz. of tint to the bottle.

i Tinting is not required

5

APPLY TEXTURE

Attach mixed bottle to **2K Urethane Chip Guard Applicator** or pour into spray gun called out in instructions for duplicating texture.

Follow instructions for correct air pressure and distance.

6

FINISH & CLEAN

Remove masking tape while final coat is still wet. Clean gun with **XXX Universal Gun Cleaner** or solvent compliant with VOC regulations in your area.

TRUCKBED LINERS

STANDARD OPERATING PROCEDURE

1

PREP

Pressure wash and allow to dry. Clean with **SEM Solve** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with dry, lint-free cloth.

2

SAND & PRIME

Remove all rust. Sand inside of bed with P180 – P220 grit or a bed brush. Truckbed liners may be sprayed over OEM finishes.

⚠ Prime bare metal with direct-to-metal epoxy or 2K urethane primer. Allow primer to fully cure. Sand primer with P180 – P220 grit or a bed brush.

Blow off dust and tack clean. Mask off areas that are not to be sprayed.

3

APPLY

ℹ Refer to the **Technical Data Sheet** for mixing instructions.

Spray 2 – 3 light coats. Allow proper flash time between coats. The first coat should not achieve full coverage and subsequent coats should be applied in the same manner. Remove masking tape immediately after applying final coat.

SEM[®] PLASTIC REPAIR

STANDARD OPERATING PROCEDURE

1 PREP

Clean front and back with **Scuff & Clean** and damp, gray scuff pad. Rinse with water and dry or wipe with a clean, damp cloth until removed. Clean front and back with **SEM Solve**, **Plastic & Leather Prep** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with dry, lint-free cloth.

2 SAND & DISH

On front side, sand repair area with P80 grit. Dish out damage with P36 grit disc at a low RPM. On back side, grind repair area with P36 grit disc at a low RPM. Blow off surfaces.

- ① Paint does not need to be stripped from the repair if it has good adhesion. Do not grind too fast and cause plastic to melt. (Optional) Apply
- ② **XXX Adhesion Promoter** to all prepped surfaces.

3 REINFORCE & FILL BACK

Mask front side of repair to prevent repair material from flowing through. Apply **Plastic Repair Contouring Tape** (mesh only) to back side. Apply **Dual-Mix™ Multi-Plastic Repair Material** or **Dual-Mix Problem Plastic Repair Material** and cover mesh tape. Spread material firmly. Allow to set.

4 REINFORCE & FILL FRONT

Remove tape from front. Fill front with **Dual-Mix Multi-Plastic Repair Material** or **Dual-Mix Problem Plastic Repair Material**. Spread material firmly and build up higher than panel to allow for sanding. Allow to set before sanding.

5 SAND & SKIM

Sand with P80 grit. Finish with P180 grit. If needed, use a skim coat of **Flexion Flexible Finishing Putty**, then sand with P180 – P320 grit.

- ① Refer to **Plastic Refinishing SOP** for refinishing steps.

PLASTIC TAB REPAIR

STANDARD OPERATING PROCEDURE

1**PREP**

Clean front and back with **Scuff & Clean** and damp, gray scuff pad. Rinse with water and dry with clean, lint-free cloth. Clean front and back with **SEM Solve**, **Plastic & Leather Prep** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with dry, lint-free cloth.

2**GRIND & ADHESION PROMOTER**

Grind repair on both sides at low RPM or by hand with P36 grit disc. Drill 1/8" holes in repair area to help "lock in" the repair material. Blow off surface.
⚠ Do not grind too fast and cause plastic to melt.
ⓘ For TPO, EPDM, PP and similar plastics, apply **Adhesion Promoter** as per instructions.

3**CREATE TEMPLATE (OPTIONAL)**

Cut enough **Plastic Repair Contouring Tape** to fold around both sides of the tab. Use permanent marker to trace a good tab for a template.

4**APPLY QUICK SET**

Apply **Dual-Mix™ Quick Set Adhesive** to the mesh side of tape. While wet, fold the tape around broken tab and press firmly to smooth. After cool down, remove **Plastic Repair Contouring Tape** release film.

5**FINISH**

Grind the tab back to its original shape and size. Re-drill the bolt hole.

CHECK LOCAL VOC REGULATIONS TO ENSURE COMPLIANCE OF ALL PRODUCTS IN YOUR AREA. ALWAYS WEAR OSHA REQUIRED (PPE) PERSONAL PROTECTION EQUIPMENT TO ENSURE YOUR SAFETY.

FUSE-WELDING PROCESS

Standard Operating Procedure

SOP4P03-EN-1125

- 1 Prep the Part**
- Wash both sides with soap and water (only use soap designed for automotive plastics).
 - Rinse with clean water and blow dry.
 - Sand the surface with 400 grit paper to remove all paint around the repair area. It is not necessary to remove all of the OE texture if present.

- 2 Fuse Welding (inside first)**
- Channel the tear 1/2 the depth of the plastic using the Burr Grinder.
 - Use Weld Support Tape to reinforce the opposite side while completing the repair.
 - Fuse weld the split. Select the appropriate heat setting on the welder, 1100-1200°F (600-650°C) for a 5 mm welding nozzle.
 - The welding strip should be held at a 90 degree angle to the surface of the part. The welder should be held so the nozzle is at a 45 degree angle to the welding strip and the surface of the part. The nozzle should be approximately 1/2 an inch (1.5cm) away from where the welding strip and base plastic meet.
 - Heat the base plastic and welding strip to approximately 325 to 350°F (162-177°C) for proper fusion. Apply downward pressure with your hand on the welding strip while directing heat at the point where the strip and base plastic meet. You should observe the welding strip and base plastic fusing together as you weld.
 - Multiple welds may be necessary depending on the shape of the split. Always start welding before the channel begins. Cool the weld with compressed air.
 - If the split goes to an edge, run a brace weld (T-weld) across the edge of the split.
 - The brace weld should run along the edge of the split, perpendicular to the split. This will help prevent the split from cracking if the bumper is flexed or stressed.
 - Repeat the process for the outside repair

- 3 Filing the repair**
- Use the Plastic Shaving File to ensure the repair area is level with the surface of the part.
 - File in a linear motion. The file will only cut in one direction, the direction the teeth are facing. Be careful not to damage or distort the style lines of the bumper.

- 4 Sand the Repair Area**
- Remove the file marks with the 6 inch sander and 180 grit on a medium speed. Be careful not to damage or distort the style lines of the bumper.
 - Use progressively finer grit paper to finish out the repair (180, 220, 320). Feather the paint around the repair area, making the transition from bare plastic to the existing paint as gradual as possible.

- 5 Final Inspection**
- Perform a thorough inspection of the repair area, and part as a whole, to ensure the quality of repair.
 - Ensure the style lines are restored properly.
 - Check again for any highs and lows or imperfections that may have been missed.

Check local VOC regulations to ensure compliance of all products in your area.
Always wear OSHA-required Personal Protection Equipment (PPE) to ensure your safety.

BASIC MASKING

STANDARD OPERATING PROCEDURE

1

PREP

Clean with **SEM Solve** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with dry, lint-free cloth.

2

EDGE MASKING

Mask edges and trim molding with 3/4" **Auto Refinishing Masking Tape**.

Fine edge masking

Mask all fine edges with **Blue Fine Line Tape** prior to applying **Auto Refinishing Masking Tape**.

3

OVERSPRAY PROTECTION

Protect rest of vehicle by applying plastic sheeting.

Protect repair perimeter with masking paper.

- ⓘ All surfaces must be completely dry before applying plastic sheeting

4

REMOVAL

Remove tape at a 90° angle to the vehicle's surface after painting.

PRODUCT LIST

PREP

PLASTIC REFINISHING

STANDARD OPERATING PROCEDURE

1

PREP & PRIME

❗ If damage is present, refer to **Plastic Repair SOP** first.

Clean with **Scuff & Clean** and a damp, **Gray Scuff Pad**. Rinse with water and dry with clean, lint-free cloth. Clean with **SEM Solve**, **Plastic & Leather Prep** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with clean, lint-free cloth. Prime as per manufacture instructions.

2

GUIDE COAT & SAND

Apply **Guide Coat Black** or **Premium Powder Guide Coat** to dried primer. Sand with 320 – 400 grit. Finish sanding with 600 grit.

3

ADD TEXTURE IF NEEDED

Apply **Texture Coating** or **Chip Guard** as per instructions.

4

PAINT

Apply **Bumper Coater™**, **Factory Pack™** or other automotive paint per instructions.

SEM[®] E-COAT PANEL PREP

STANDARD OPERATING PROCEDURE

1 PREP

Clean with **SEM Solve** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with dry, lint-free cloth.

2 HAND SANDING

Sand edges and other hard to reach areas with 400-grit sheetroll sandpaper attached to a soft pad or by using a **Maroon Scuff Pad**.

3 DA SANDING

Sand all other surfaces using 400-grit sandpaper on a DA sander.

4 RE-CLEAN

Blow off and re-clean using **SEM Solve** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with dry, lint-free cloth.

SEM[®] FEATHER-PRIME-BLOCK

STANDARD OPERATING PROCEDURE

1

FEATHEREDGE

Featheredge the repair area with 180-grit, then 320-grit on a DA sander.

Blow off and clean with **SEM Solve** or **XXX Universal Surface Cleaner**.

2

MASK FOR PRIMER

Back-mask the repair area to be primed.

3

APPLY PRIMER

Apply primer per manufacturer recommendations

4

GUIDE COAT

Apply **Premium Powder Guide Coat** or **Guide Coat Black** onto the surface by spraying light mist coats.

Wipe of any overspray with a clean, dry cloth.

5

BLOCK SAND

Block sand with 320-grit sheetroll sandpaper.

Visually inspect while sanding for high or low spots indicated by the guide coat.

Address high or low spots before proceeding.

6

FINISH SAND & RE-CLEAN

Finish sand the area with 400-grit sandpaper on a DA with a soft interface pad.

Blow off and clean the surface using **SEM Solve** or **XXX Universal Surface Cleaner**.

OEM REFINISHING SYSTEM™

STANDARD OPERATING PROCEDURE

1

PREP

Clean with **SEM Solve** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with dry, lint-free cloth. Scuff with P400 grit or Maroon Scuff Pad. Blow off and wipe with tack rag if needed.

2

EZ COAT™

Choose appropriate **Ez Coat™** color. Apply 1 coat until hiding. Flash time achieved while moving across larger parts.

ⓘ Smaller parts may require 1 - 2 minutes to properly flash.

3

FACTORY PACK™

Choose appropriate **Factory Pack™** color. Apply 1 coat until hiding. Flash time achieved while moving across larger parts.

ⓘ Smaller parts may require 1 - 2 minutes to properly flash.

4

1K CLEAR

Choose **1K HS Clear (Matte, Semi-Gloss or Gloss)**. Apply 1 coat until covered. Allow 30 – 60 minutes before assembly or installation.

SEM[®] REFINISHING TRIM STANDARD OPERATING PROCEDURE

1

METAL PREP

Clean with **SEM Solve** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with dry, lint-free cloth. Sand with P400 grit or a Maroon Scuff Pad and blow off. Re-clean with **SEM Solve** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with dry, lint-free cloth.

PLASTIC PREP

Clean with **SEM Soap** and a damp, Gray Scuff Pad. Rinse with water and dry. Clean with **Plastic & Leather Prep** and a lint-free cloth.

⚠ Repeat above steps if water beads on surface.

ⓘ For TPO, EPDM, PP and similar plastic, apply **Sand Free** or **Adhesion Promoter** as per instructions.

2

AEROSOL APPLICATION

Apply **Trim Black**.

Coats: 2 medium

Flash time: 5 – 10 minutes between coats

Dry to touch in 1 hour, achieves full hardness in 24 – 48 hours.

SPRAY GUN APPLICATION

Reduce 1:1 with urethane reducer. Apply **Trim Black**.

Air pressure: 20 – 25 psi with non-HVLP equipment
8 – 10 PSI at the cap with HVLP

Fluid tip: 1.2 – 1.4 fluid tip size

Coats: 2 medium wet

Flash time: 5 – 10 minutes between coats

Dry to touch in 1 hour, achieves full hardness in 24 – 48 hours.

FILLING A CUSTOM FILL™ AEROSOL BLANK

STANDARD OPERATING PROCEDURE

1 PREP

Remove disc from cap and insert over piston inside the fill machine. Place clear plastic cap into the **Fill Cylinder**. Press down and rotate cap until it drops into place.

⚠ Do not fill cap prior to inserting in **Fill Cylinder** and onto **Custom Fill Aerosol Blank**.

2 FILL THE CUP

Remove the tip from the aerosol. Press the cylinder/cap assembly on top of aerosol blank. Fill the clear plastic cap with paint to the fill line.

⚠ Solvent blanks can be filled with single stage urethane, enamel and lacquers as well as 2K primers, sealers and clear coats. The waterborne blank can be filled with most waterborne basecoats and top coats. Always check for compatibility prior to filling.

3 LOCK ASSEMBLY IN PLACE

Place assembly into machine. Hold cylinder and can assembly in place and tighten pedestal on bottom. Close door on **Custom Fill Machine**.

4 FILL THE AEROSOL

FOR MANUAL MACHINE: Rotate crank until it stops and then rotate in the opposite direction until it stops.
FOR PNEUMATIC MACHINE: After closing the door, the machine will fill the aerosol. Wait until the machine is silent. Open the door and loosen pedestal to remove assembly from the machine.

5 REMOVE CAP & REPLACE TIP

Remove cylinder/cap assembly from machine. Twist gently to remove cylinder from can. Hold cylinder and press down on a hard surface to remove cap. Replace tip.

⚠ Purge valve by test spraying for a few seconds until spray is uniform.

ℹ Mark filled aerosol with coating type, color name

VCS™ VERSATILE CUP SYSTEM

STANDARD OPERATING PROCEDURE

SOPVCS
0426

1

INSTALL ADAPTER

Review crossover sheet to determine the correct adapter for your spray gun.

Insert adapter into spray gun and tighten.

2

INSTALL LINER

Insert liner into hard cup. Make sure to align vent tabs on liner with slots in bottom of hard cup.

Turn liner clockwise to lock in place.

Fill cup with desired material.

3

ATTACH LID

Firmly press lid onto assembled cup and liner.

Lock down all four lid tabs.

4

ATTACH CUP TO SPRAY GUN

Press adapter onto assembled cup.

Align locking tabs on adapter to corresponding tabs on lid.

Turn clockwise until lid locks in place.

⚠ Locking only takes a quarter turn.

5

OPEN/CLOSE RUBBER VENT

Open rubber vent in liner for most spray applications.

For inverted spray applications, close vent and allow liner to collapse.

⚠ Don't forget to close vent for liquids storage or when inverting.

CHECK LOCAL VOC REGULATIONS TO ENSURE COMPLIANCE OF ALL PRODUCTS IN YOUR AREA. ALWAYS WEAR OSHA REQUIRED (PPE) PERSONAL PROTECTION EQUIPMENT TO ENSURE YOUR SAFETY.

SMALL AREA PAINT CORRECTION

STANDARD OPERATING PROCEDURE

1

DEFECT REMOVAL

Remove paint defects using 1500-2000 grit sandpaper on a 3" DA sander.

Wipe clean to visually inspect when defect is fully removed.

2

SAND SCRATCH REFINEMENT

Further refine sand-scratches with 3000-grit foam pad and water on a 3" DA sander.

3

COMPOUND

Compound the area using **Performance Cutting Compound** on a 3" Green Foam Pad.

4

POLISH

Polish the area using **Performance Finishing Polish** on a 3" Red Foam Finishing Pad.

5

FINAL INSPECTION

Wipe clean with **Ultra Microfiber Towel** and visually inspect to ensure defect has been removed and polished to a gloss.

SEM[®] VEHICLE DETAILING

STANDARD OPERATING PROCEDURE

1

CARPET

Apply **All Purpose Degreaser** with a 10:1 dilution ratio to any stains or heavily soiled areas on carpet and upholstery.

Spray a light mist coat on soiled areas, brush lightly and wipe clean with a clean towel. If needed on carpet or fabric, use a wet vacuum or extractor.

2

WHEELS & ENGINE BAY

Apply **Wheel Cleaner** RTU for cleaning brake dust from wheels and tires.

Apply **All Purpose Degreaser** at a 4:1 dilution ratio for cleaning the engine bay, door jams, tires or any difficult to reach areas.

Next, scrub, pressure wash and rinse all areas where cleaner was applied. Rinse the entire vehicle to remove any loose residue.

3

SOAK & WASH EXTERIOR

Use **All Purpose Degreaser** at a 4:1 dilution ratio to pre-soak any remaining heavily soiled or hard to reach areas.

Wash entire vehicle with **Premium Car Wash** at a 64:1 ratio, rinse entire vehicle. Dry the vehicle with a drying cloth or squeegee.

4

TIRE DRESSING

Dress dry tires and trim with **Body Shop Safe Dressing** RTU.

Generously spray **Body Shop Safe Dressing** on tires, then allow to dry. If needed, remove overspray from rims or adjacent panels.

5

INTERIOR & GLASS

Apply **All Purpose Degreaser** with at a 10:1 dilution ratio to interior vinyl or leather, wipe clean with clean towel.

Clean windows (interior and exterior) using **Premium Glass Cleaner** at a 10:1 ratio.

6

FINAL DETAIL

Mist **Instant Detailer** onto exterior surfaces of the vehicle, then wipe clean with microfiber cloth.

Instant Detailer removes compound residue, dust or fingerprints and improves gloss.

TEXTURE COAT APPLICATION PROCESS

Standard Operating Procedure

SOP4P01-EN-1025

Preparation and cleaning

- Wash both sides with soap, water and a gray scuff pad, only using soap designed for automotive plastics.
- Rinse with clean water and dry.
- Blow dry any remaining water from the part with compressed air.

Sand part and repair damage

- Sand the textured surface with *SEM* Performance Abrasives 400-Grit Sandpaper on a dual-action sander. For hard-to-reach areas, use a *SEM* Maroon Scuff Pad.
- For dents, splits and punctures in plastic substrate, repair the part before application of coatings. Scan the *Watch and learn* QR code below for more information.

Clean part

- Clean with *SEM* Plastic & Leather Prep, *SEM* Solve, *SEM* XXX® Universal Cleaner or other approved plastic cleaner.
- Surface must be completely dry. Avoid saturating the panel with cleaner. Dry with a clean, lint-free towel.
- Use a bunched-up tack rag to lightly wipe the surface, removing any lint or dirt.

Apply 4Plastic Adhesion Promoter

- Shake the can 2-3 minutes prior to application.
- Apply 1 medium-wet coat to the part.
- Spray at a distance of 6-8" (15-20 cm).
- Allow to fully flash at least 5 minutes before applying topcoats.
- If the topcoat time exceeds 24 hours, scuff, clean and re-apply.

Apply 4Plastic Plastic Primer

- Remove the lid from the can and stir with a paint stick until the primer is mixed thoroughly.
- The plastic primer is ready to spray right out of the can. Do not reduce the primer.
- Allow 5-10 minutes of flash time between coats.
- The primer is ready for sanding when it changes from a shiny to a matte finish.
- The primer will air dry in 30-60 minutes or can be baked at 140° F (60° C) for 40 minutes.

Choose correct color and texture

- Use the 4Plastic app to choose the correct color, texture and/or application matching.

Mix 4Plastic Texture Coat products

- Remove lid from the black texture coat can and stir with a paint stick until product is thoroughly mixed.
- Black texture coat may be mixed with white tint to adjust the color. Mix prior to the addition of the activator.
- Mix 7 parts texture coat to 1 part texture coat activator.
- Mix well after activation.

Apply texture coat

- Using a 1.4 tip, apply 2-3 light coats until coverage is achieved.
- Allow 5-10 minutes flash time between coats.
- A light "drop coat" can be applied to lower gloss and adjust texture.
- Variations in temperature, air pressure, spray distance and technique used will affect texture. Always spray test panel.

DUPLICATING OEM TEXTURES

STANDARD OPERATING PROCEDURE

1

REPAIR DAMAGE

If extensive damage is present, refer to **Plastic Repair Standard Operating Procedure** first.

2

CLEAN

Clean with **Scuff & Clean** and a damp, Gray Scuff Pad or a nylon bristle brush. Rinse with water and dry with clean, lint-free cloth. Clean with **SEM Solve**, **Plastic & Leather Prep** or **XXX Universal Surface Cleaner**. Wipe clean in one direction with clean, lint-free cloth.

3

PREP

Sand any shallow scratches or scuffs until smooth. Blow off and wipe with a tack rag. Mask the area to be sprayed.

FOR RAW PLASTIC: Blow off and apply **XXX Adhesion Promoter** as per instructions.

FOR PAINTED SURFACES: Sand with a gray scuff pad.

4

APPLY TEXTURE

Apply **Bumper Coater™** or **Trim Black** as a wet bed over the extended repair area. Apply **Texture Coating** in light mist coats 12" - 24" from surface.

① Apply additional coats in the same manner if needed to achieve OEM texture.

② Be sure to apply lightly enough so that raised textured spray does not flow together.

5

SAND

Allow to completely dry before sanding. Sand flat surfaces with P320 – 800 grit and use a gray scuff pad on sharp edges and corners. Blow off and wipe with a tack rag.

6

PAINT

Apply **Bumper Coater** or **Trim Black** as per instructions.
